

STEM in Action

Sound Bite

Exploration

Students explore sound waves and vibrations to develop a phone that helps friends talk over a distance. By using critical thinking, communication, and collaboration to design a phone, students prepare for essential skills of the 21st century.

Students work through the Engineering Design Process – to learn the value of rethinking and supporting multiple solutions. STEM in Action® modules are the easy-to-implement PreK-5 solution for integrating science, math, literacy, and engineering skills into real-world problems. These modules focus on the Engineering Design Practice which is a critical component of NGSS, state standards, and national initiatives. The cost for this trunk is \$25 for a week based on availability. All supplies needed for the lessons are provided in the trunk.
